

## Our industry doesn't need another EHR. Behavioral health deserves something better. *So Core Solutions created something better.*

This is what it looks like when AI is built into the foundation of an EHR — not added on top of one. Every workflow, every touchpoint, every decision point is powered by intelligence built into every layer of the platform.

### **Not bolted on. Integrated AI.**

AI is woven into the core of the platform — working alongside care teams to bring forward what matters, when it matters.

### **Real-time clarity. Immediate action.**

See what's most important sooner and act faster. Make more confident decisions in the moment — no searching, no hesitation.

### **Earned trust.**

Ethically developed AI — always guided by human judgment. Your data stays protected, private, and never used to train AI models.

### **One platform. One experience. Total focus.**

A single, unified system eliminates fragmentation and administrative drag — so care teams can stay focused on care.

### **Built into your workflows. Every datapoint throughout your organization is utilized.**

AI works behind the scenes — fewer clicks, faster results. Designed to fit how care teams actually work. Real efficiency and true care optimization.

### **Designed exclusively for behavioral health and IDD.**

A platform as dedicated as the clinicians who use it. Purpose-built, not generically adapted.

**Cx360 Enterprise: Not another EHR. Not another upgrade. The Intelligent Care Record**  
*The first in behavioral health.*

# Ethical AI By Design

AI in behavioral health cannot be a black box. Every insight must be understood.  
Every action must be accountable. Every decision must remain human.

## The Cx360 Enterprise: Intelligent Care Record difference:

### AI That Shows Its Work

- Insights are explainable, traceable, and grounded in real clinical context.
- See what informed them. Validate them. Act with confidence.

### AI That Protects What Matters

- Your data stays private, secure, and fully governed.
- Never used to train external models. Never exposed beyond your organization.

### AI That Keeps Humans in Charge

- AI surfaces risks, gaps, and next steps without making decisions.
- Human judgment remains central.

### AI That Reflects Real Care

- Shaped by behavioral health and IDD workflows. Proven in live environments.
- Built around how care is actually delivered.

### AI That Ensures Accountability

- Bias is actively addressed. Outputs are continuously evaluated.
- Performance is measured in real-world use.

### AI That Supports Compliance

- Documentation is clearer, more consistent, and aligned with regulatory expectations, supporting defensible, audit-ready care.

**See the Insight. Understand the why.  
Stay in control.**

The Intelligent Care Record strengthens decision-making, so every action is informed, intentional, and yours.
